MAP 2-SNAPSHOT SITES

1. Find a Snapshot site near your home or business. The sites are indicated by green circles on the map.

In the search window in the top right corner, type in your address. The map will zoom into your location, and then you can scroll in or out to find the nearest Snapshot sites. Click on the green dot to bring up the Site Name in a new window.

The Snapshot sites nearest to me are

2. On the bottom of the map, you can click the white arrow to bring up a data table with historical water quality data from each site. You can also refer to the charts on the left side of the map to determine average measurements of each parameter tested for the sites within the visible locations on the map.

What is the average nitrate level of your Snapshot sites?

What is the average pH level for your Snapshot sites?

3. Use the Filter Options at the bottom right of the screen to filter the data by date, stream, or watershed and further investigate trends in water quality in your area. You can also click the information button on the map (shows as an italicized “i”) for more information on interpreting the data.
